THE PHILOSOPHY OF THE SCHOOL

Philosophy is search for truth and wisdom and the science of all sciences. The dominant philosophy that guides the nursing knowledge is humanism that defines about the nature of human beings and the human environment relationship, it emphasizes on humanistic or moral values of caring and the promotion of individual welfare and rights. It is also an art of reasons that explore values. The philosophy of a nursing school defines the value statements about both the practice and the teaching of Nursing. The statement reflects the values, beliefs goals or opinions as agreed upon by the members of the school faculty. The philosophy of education gives direction to the aim of education. Important philosophies of education are idealism, naturalism and pragmatism.

The philosophy of nursing education determines the aims, objectives, content, method of teaching and evaluation. It deals with beliefs and values with regard of man as a learner, educator and nurse or patient, In addition it also deals with beliefs about society, nursing health etc. We believe that the basic course in nursing should prepare nurses for first level positions in nursing both in the definition of ICN of the unique function of the nurse which is to assist the individual sick or well, in the performance of those activities contributing to health or to its recovery (or to peaceful death) that he would perform unaided if he had the necessary strength, will or knowledge and to do this is such a way as to help him gain independence as rapidly as possible.

Keeping the above concept in mind, the curriculum is planned so to provide for experience in all major clinical areas of nursing in the hospital and in the community area. The curriculum should develop in the student an ability to meet the patients' mental and emotional needs and an awareness of the social nature of man, which will enable her / him to see the patient as a person with a family and a member of the community.

It should emphasize preventive, promotive and rehabilitative aspects of heath throughout and the hospital, community, school environment and facilities provided should make it possible to put these principles into practice

AIMS

- To build upon the skills and competencies acquired at the diploma in nursing level.
- To provide an educational programme through which the graduates will be prepared to assume responsibility in the primary, secondary and tertiary care of the people as professional nurses.
